1. Purpose

This document is intended for Information Technology personnel involved in the development of programmes to upload data from their Electronic Medical Record (EMR) system to the electronic Health Record Sharing System (eHRSS).

The technical interface requirements for implementing Health Level Seven (HL7) Fast Healthcare Interoperability Resources (FHIR) Release 4 (R4) for uploading the Chinese Medicines Dispensing Records to eHRSS are provided below. Readers who prefer more in-depth study of the HL7 FHIR (R4B) standards and content standards may refer to the HL7 FHIR website <https://www.hl7.org/fhir/> and the **eHR Content Standards Guidebook** on the eHealth official website <https://www.ehealth.gov.hk/> for more detail.

2. Data Components

Chinese Medicines Dispensing Date/Time

It includes the date and time when the drug was dispensed.

Chinese Medicines Dispensary

It includes the information of the healthcare institution (HCI) which dispensed the drug.

Chinese Medicines Prescriber Details

It includes the information of the healthcare institution (HCI) which issued the prescription order and the name of the prescriber.

Dispensed Chinese Medicines and Administration Method

The information of Chinese medicines details and administration methods of the dispensing.

Chinese Medicines Prescription Image (PDF)

The PDF format of the Chinese medicines prescription order.

3. Upload Standards

Supported Data Standards Level

The Chinese Medicines Dispensing data domain (CMRXD) supports Level 2 (including text / PDF report) or Level 3 data standards only.

Examples of Chinese Medicines Dispensing Scenarios

Below are the examples depicting the different details in Level 2 and Level 3 Chinese Medicines Dispensing records:

Data field	Level 2 data	Level 3 data

Modes of Data Upload

HCP can upload clinical data in TWO upload modes according to needs. Please refer to the relevant sections in the General Guide.

- **Data materialization (DM)** mode is to upload all of an HCR's clinical data of a specific sharable dataset (data domain) that exists in the EMR system to eHRSS. DM aims for the first data upload for an HCR who newly given sharing consent to the HCP; and
- **Incremental Load (INC)** mode is for HCP to upload all newly created, amended and cancelled clinical data of a specific sharable data from all HCRs in the EMR system to eHRSS in ONE batch since the last data upload.

Recognised Terminology

- The recognised terminology sets adopted for the eHR Chinese Medicines Dispensing Records includes:
 - HKCTT
 - pCM
- The clinical terminology and code sets used are provided in the **self-service kit**. For the latest codes used, please refer the eHR code sets published on the eHealth official website.

Message Standards

- FHIR R4 message standards in JSON format are adopted for CM Dispensing Records upload to eHealth.
- Resource and Element names are case-sensitive

Encoding

- UTF-8 encoding is used for eHR Clinical data exchange.

4. Artifacts Summary

This section provides a list of the FHIR artifact defined as part of this implementation guide:

Resource used	Definition	Cardinality
eHRSS Bundle	This profile represents the constraints and localization applied to the Bundle resource by eHRSS	1..1
eHRSS Composition	This profile represents the constraints and localization applied to the Composition resource by eHRSS	1..1
eHRSS Patient	This profile represents the constraints and localization applied to the Patient resource by eHRSS.	1..1
eHRSS Author Organization	This profile represents the constraints and localization applied to the Organization Resource referenced by Composition Resource.	1..1
eHRSS Organization	This profile represents the constraints and localization applied to the Organization Resource referenced by MedicationRequest Resource.	0..*
eHRSSMedicationDispense	This profile defines MedicationDispense structure which includes eHR Chinese Medicines Dispensing data	1..*
eHRSS MedicationRequest	This profile defines a MedicationRequest structure which includes the medication order related to MedicationDispense	1..1
eHRSS Medication	This profile defines a Medication structure which includes eHR Chinese Medicines item	1..*
eHRSS DocumentReference	This profile defines a DocumentReference structure which includes eHR Chinese Medicines Dispensing data	1..1
eHRSS Encounter	This profile defines an Encounter structure which related to the Dispensing records	0..*

Notes:

The following conventions are used for the specifications described in this document:

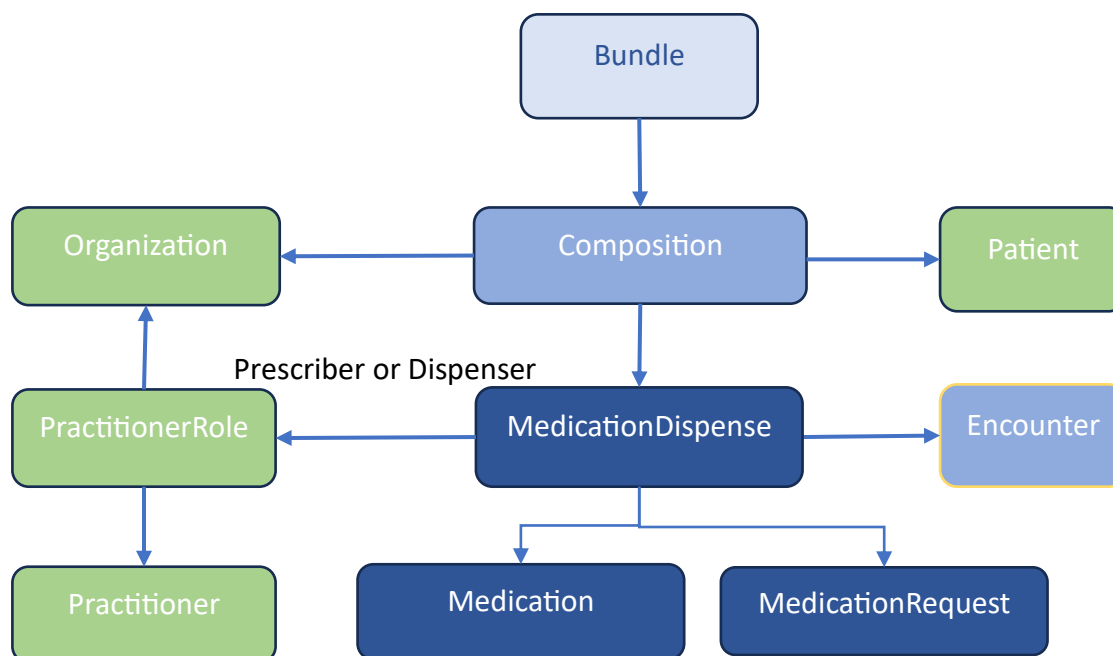

Constants:	Bolded values are constants or fixed values.
E.g.:	Example values for illustration.
[...]:	Data variables
"...":	Data values.
"M/O"	Indicates if the data field is Mandatory (M) or Optional (O). M* or O* denotes conditional Mandatory or Optional, please refer to Remarks for rules
NA:	Data Field in concern is not used.
[S]:	Must Support

5. Specification of Data uploaded

The section describes the format and data required for the data contributed to eHealth. Unused FHIR message items and those not processed by eHRSS are not listed below. Readers may refer to the HL7 (HK) website for the full HL7 FHIR R4 message specifications if required.

5.1 Composition of HL7 FHIR Message

The CM Dispensing Records are structured with the HL7 FHIR components (Resources) and hierarchy as specified below.

Bundle Resource (Single occurrence in each FHIR message bundle)

- Identify the container type for the collection of data included in the bundle. The resource composition and data contents are determined by the Bundle Type. For CM Dispensing Records data upload, the following resources are included in the bundle.

Composition Resource (Single occurrence for each bundle)

- Indicate a composition of data or document are collected in the message bundle. For “document” type of bundle, the “Composition Resource” must be the first resource to be included.

MedicationRequest Resource (Multiple occurrences are allowed in a bundle)

- Contains the list of CM Dispensing records based on the mode of upload.

Medication Resource (Single occurrences are allowed for each MedicationRequest)

- Contains the list of CM Dispensing records based on the mode of upload.

Patient Resource (Single occurrence for each **Bundle**)

- Contains the demographics data of the healthcare recipient (HCR) who has the CM Dispensing record.

PractitionerRole Resource (Single occurrence for each **MedicationRequest**)

- Contains the reference to Prescribing institution and prescriber
- Contains the reference to Dispensing institution

Practitioner Resource (Single occurrence for each **PractitionerRole**)

- Contains the prescriber 's information

Organization Resource (Single occurrence for each **PractitionerRole**)

- Contains the dispensing institution information

Encounter Resource (Single occurrence for each **Medication Order**)

- Contains the encounter information for each CM Dispensing record.

5.2 Data Elements in the Bundle Resource

A bundle is a collection of resources. For the type of “document” bundle, the following rules should be fulfilled.

+ Rule: A document must have an identifier with a system and a value

The below table listed data elements in the Bundle Resource which identifies the beginning of the container and the collection of data resources are all included under [resource.entry] in the bundle.

JSON Name	Data Value	FHIR Data Type (Max Length)	Remarks	M/O
resourceType	Name of the current resource	string(6)	Fixed value: "resourceType": " Bundle "	M
id	Resource id which is a logic id to identify the artifact A UUID represented as a URI (RFC 4122) Please see reference website in appendix	uuid	E.g. c757873d-ec9a-4326-a141-556f43239520	M
Identifier	Persistent identifier for the resource UUID/OID for Bundle	Identifier	E.g. "identifier" : { "system" : "urn:ietf:rfc:3986", "value" : "urn:uuid:0c3151bd-1cbf-4d64-b04d-cd9187a4c6e0" }	M
Type	The type is always "document"	code	Fixed value: "type": " document "	M
Timestamp	When the bundle was assembled [current time]	instant	In format: YYYY-MM-DDThh:mm:ss.sss+zz:zz E.g. "timestamp": "2024-03-01T15:04:48.865+08:00"	M
Entry fullUrl	Resources included in this bundle are collected under 'entry' Each resource is identified by a uri A UUID represented as a URI (RFC 4122)	BackboneElement uri	URI for UUID/OID HL7 FHIR Resources that collected in the CM Dispensing record upload Bundle include: <ul style="list-style-type: none"> • Composition • Patient • MedicationDispense • MedicationRequest • Medication • PractitionerRole • Practitioner • Organization • DocumentReference • Encounter E.g. "fullUrl": "urn:uuid:21c6828c-b175-4a3b-b6de-6eaf69335021"	M
resource	A document must have a Composition as the first resource. Please refer to Composition resource requirements	BackboneElement .Resource	The 1st resource must be "Composition" resource.	M

5.3 Data Elements in the Composition Resource

The Composition Resource identifies whether the upload package includes list of CM Dispensing records in this bundle.

The details of PDF naming convention

File Name	<p><HCP ID>.<Sending Location Code>.<Record Type>.<Record Key>.<Original File Name>.<File Extension>.<eHR Number>.<Generation Date></p> <p>where the <Record Type> for the Chinese Medicines Dispensing Domain is “CMRXD”</p>
------------------	---

E.g.

8088450656.BRANCHA.CMRXD.CMRXD-001.123.pdf.201000000001

1. The file name must be in capital letters except pdf extension.
2. Dot “.” is used as file name delimiters and hence the value of each file name component must not contain dot “.”

The table below listed the file name components and their respective definitions:

Seq	File name Component	Definition	Length	Remarks	M/O
1	HCP ID	A unique identifier assigned to an eHealth Healthcare Provider by eHRSS	string(10)	<u>Fixed Length:</u> 10 e.g. 8088450656	M
2	Sending Location Code	A code agreed between eHRSS and the HCP which indicates the location where the data is sending from.	string(20)	Use [HCP ID] if sending location cannot be provided. <u>Format:</u> Any combination of the following alphanumeric characters: [A-Z][0-9][-_]	M
3	Record Type	A standardised code to identify the data domain	string(5)	Refer to defined Dataset Code e.g. CMRXD	M
4	Record Key	A unique identifier for a record within the HCP’s EMR system	string(50)	e.g. CMRXD-0001	M
5	Original File Name	The file name used in source institution	string(100)	e.g. 123	M
6	File Extension	pdf (Portable Document Format File)	string(3)	Fixed value: pdf	M
7	eHR Number	A unique HCR identifier assigned by eHRSS	string(12)	<u>Fixed length:</u> 12 e.g. 2010000000001	M

Seq	File name Component	Definition	Length	Remarks	M/O
8	Generation Date	File generation date. It should be the same value of the [composition.date]	string(14)	In format: YYYYMMDDhhmmss	M

7. Examples

In the following samples, data variables that have to be generated with each specific upload are quoted in square brackets and highlighted in **[Red]**. The definitions and expected values of these variables are listed in the previous section. All other parts including data values should not be altered without confirmation with the eHRSS project teams.

A sample in JSON format are included in the eHealth Data Upload Self Service Kit. Developers may use it as a template for incorporation with their data uploads after modification.
